

Project Brief

Prepared by:Roaa Abu-Shaqrah

Project Name: Learning Management System by Orange

Date:

19-4-2021

Day:

Monday

Objective for project:

1. Gather all sources and files in one place.
2. Publish only reliable and accurate sources.
3. Electronic Library.
4. Educational videos.
5. Save time and effort.
6. Make the system flexible and uncomplicated for users.

Description & Main features:

This site was built to organize the students training process within the academy based on self-learning and knowledge sharing. Students can log on to the website and watch courses related to the technology they want to learn, in addition to reading and downloading books from the electronic library. The site administrator can also read, create, update and delete from the Dashboard and the trainer can also upload videos and books to students. Website details:

1. Dashboard:

CRUD operations for:

a student, a trainer, Admin, courses, Video and book .

A home page It contains information about the academy, A page that displays the courses, a page that displays books And user profile page

Technologies:

- HTML5
- CSS
- Bootstrap (orange bootstrap)
- Laravel (version 5.8).
- MYSQL.

Conclusion:

The benefit of having an electronic learning system for the academy is to save money for students and also to collect useful content in a programming field that can be invested later.
